

You can use addition to show that one of the calculations is incorrect.

	6	' 3		
	7	4	' 2	7
—	2	6	4	1
	4	7	8	6

	8	4	3	4
—	4	5	2	1
	4	1	1	3

True

By using the inverse operation to check, we can identify the mistake made in the second example.

	8	4	3	4
−	4	5	2	1
	4	1	1	3

$1 + 5$ does not equal 4
