

Simple Stop-Motion Animation

Use this set of images, you can make your own simple stop-motion animation film.

Open the Jellycam software.

Choose  **Picture Files** from the menu, then click on BROWSE FOR PICTURES.

Locate the set of pictures above and select them all, then click Open. You should have all the images in the Frames window at the bottom of your screen.

Editing

Rearrange: check that the pictures are in the correct order. You can change them by dragging the frames and dropping them in a new position in the sequence. Click Duplicate to make a copy of a frame, or Reverse to put them in the opposite order.

Watch/Play: In the window Your Movie so far... you can see a preview of your animation. Click PLAY to watch all frames and speed up or slow down by changing the Frames per Second setting.

Finishing Touches

Click Title Screen on the left-hand menu to add a title at the beginning. If you have access to any audio files, you can also add a soundtrack. When you have previewed your movie one last time and feel happy with the clip, select Create Video. Type a suitable filename and click Create vid.

Challenge:

Can you use or make your own images with a webcam or other camera to create a new animation?
